ELECTROSTATIC SPRAYER

The S-1 is a professional gun sprayer that uses the principle of electrostatic induction to distribute sanitising solutions effectively and uniformly across a variety of surfaces.

The ergonomic design of the S-1 coupled with its light weight ensures that it remains comfortable to hold over extended periods. This is a critical feature, given that the lithium battery power source has a run time of several hours.

With a spray pattern that can be adjusted between 40µm through to 80µm the S-1 is suitable for a large number of applications using various sanitising solutions. The S-1 atomizes the solution to such a degree that it becomes a fogging spray - extremely small and light drops. Through the electrostatic charge generated by the sprayer these drops are attracted by the targeted surface and, as they lay down they create a sanitizing coating, which effectively reaches every point of the area to be treated.

SPECIFICATION

Theoretical coverage	Up To 3765 ft ²
Tank capacity	1 ltr Standard 2 ltr Long Range Back Pack Available
Nozzle	Full cone
Nozzle sizes	40µm 60µm 80µm
Power supply	18 volt Li-on battery 2000 mAh
Optional upgrade	18 volt Li-on battery 4000 mAh
Battery run time	Up to 6 hours
Dimensions	16.5"(L) x 11"(H) x 3.5"(W)
Weight, no battery	2lb 14oz
Weight, with battery	3lb 12oz
Weight RTU	5lb 15oz

Recommended Areas Of Use

Hotels • Airports • Hospitals • Shopping Centres • Car Garages & Dealerships • Public Transport Including Buses & Trains • Offices
• Industrial Premises • Educational Facilities & Many More.
